

Mettre son site en ligne :

1 . Tout d'abord, on va devoir créer un compte sur le site InfinityFree  
Ensuite, on donne un nom de domaine à notre futur site

2. on a alors notre nom de domaine

The screenshot shows a web-based interface for managing domains. At the top left is a title 'Domains'. To the right is a purple button with a white plus sign and the text '+ Add Domain'. Below this is a table with two columns: 'DOMAIN' and 'ACTIONS'. A single row is visible, containing the domain name 'monprojetwordpress12.infinityfree.me' and a purple 'Manage' button with a white arrow icon.

3.. On clique sur manage

The screenshot shows two side-by-side sections. The left section is titled 'Directory Status' and contains four items: 'Directory' (htdocs), 'Directory Exists' (green checkmark), 'Index File' (index.php), and a purple 'Open in File Manager' button. The right section is titled 'Website Builder Status' and contains two items: 'Website Created' (green checkmark) and 'Website Published' (red X). Below these is a purple 'Launch Site.Pro Website Builder' button.

4. Puis on ouvre le gestionnaire de fichier, on importe le wordpress qu'on a déjà (dans le fichier mamp htdocs car mac)

The screenshot shows a dark-themed file manager interface. At the top is a header 'Upload Files'. Below it is a 'Upload Type:' section with three options: 'Files' (selected), 'Folder', and 'Zip & Extract'. Underneath is a 'Select Folder:' section with a dropdown menu showing 'Sélect. fichiers 11255 fichiers'. A note below says 'Select a folder to upload (preserves structure) - Upload starts automatically'. At the bottom, a progress bar indicates 'Created: mon\_site\_wp/wp-content/plugins/themeisle-companion/obfx\_modules/menu-icons/js/vendor' and '7%'. A blue progress bar is partially filled.

## 5. Quand le fichier est uploadé, on créer notre base de données sur infinityfree

The screenshot shows the 'Create Database' page within the InfinityFree account settings. On the left, a sidebar menu is open under 'MySQL Databases', showing options like Home, Upgrade to Premium Hosting, Account Statistics, FTP Details, and MySQL Databases. The main area is titled 'Create Database' and asks for the name of the new database. A note says it can take up to 72 hours for new domains to be accessible everywhere due to DNS caching. Below the input field, there are 'Back' and 'Create Database' buttons. The 'Create Database' button is highlighted in purple. Below this, a list of existing databases is shown, including 'if0\_40474735\_wp'. For this database, there are 'phpMyAdmin' and 'Delete' buttons. At the bottom left is a 'Create Database' button.

ici elle s'appelle if0\_40474735\_wp

## 6. Après cela, on va dans le PhpMyadmin du localhost et on exporte les données du wordpress

The screenshot shows the 'Exportation des tables depuis la base de données « agentdumoss »' section in PhpMyAdmin. It includes fields for 'Méthode d'exportation' (set to 'Rapide'), 'Format' (set to 'SQL'), and an 'Exporter' button. The top navigation bar of PhpMyAdmin is visible, showing tabs for Structure, SQL, Rechercher, Requête, Exporter, Importer, Opérations, Priviléges, Procédures stockées, Évènements, and a dropdown menu.

## 7. une fois exporté, on l'importe sur le phpmyadmin de la base de donnée du site

The screenshot shows the 'Importation dans la base de données « if0\_40474735\_wp »' page. At the top right are two buttons: a purple one labeled 'phpMyAdmin' and a red one labeled 'Delete'. Below the buttons, the database name 'if0\_40474735\_wp' is displayed. The main area contains several configuration sections:

- Fichier à importer :** A note states: "Le fichier peut être compressé (gzip, bzip2, zip) ou non. Le nom du fichier compressé doit se terminer par [format].[compression]. Exemple : .sql.zip". It includes a 'Choisir un fichier' button, a note about file size (max 300M), and a note about dragging files.
- Importation partielle :** A checkbox 'Permettre l'interruption de l'importation si la limite de temps configurée dans PHP est sur le point d'être atteinte.' is checked. A note below it says: '(Ceci pourrait aider à importer des fichiers volumineux, au détriment du respect des transactions.)'. A field 'Ignorer ce nombre de requêtes (pour SQL), à partir du début :' has the value '0'.
- Autres options :** A checkbox 'Activer la vérification des clés étrangères' is checked.
- Format :** A dropdown menu set to 'SQL'.
- Options spécifiques au format :** A dropdown menu set to 'Mode de compatibilité SQL : NONF'.

## 8. Une fois ceci fait, on modifie sur le gestionnaire de fichier de l'étape 4 le fichier wp-config.php en mettant les informations du SQL database (database name, username, password, hostname)

The screenshot shows the 'MySQL Connection Details' and 'List of MySQL Databases' sections of the MySQL Manager.

**MySQL Connection Details:**

MYSQL USERNAME	if0_40474735	MYSQL PASSWORD	*****
MYSQL HOSTNAME	sql308.infinityfree.com	MYSQL PORT (OPTIONAL)	3306
MYSQL DATABASE NAME			
if0_40474735_XXX See below for available database names			

**List of MySQL Databases:**

DATABASE NAME	ACTIONS
No databases found on this account	

**Create Database:** A purple button with a '+' icon and the text 'Create Database'.

**How to use MySQL:** A note stating: "MySQL is a relational database system. If you want your website to have any kind of interactive functionality, like social".

Edit File: wp-config.php (PHP)

```
17 *  
18 * @package WordPress  
19 */  
20  
21 // ** Database settings - You can get this info from your web host ** //  
22 /** The name of the database for WordPress */  
23 define( 'DB_NAME', 'if0_40474735_wp' );  
24  
25 /** Database username */  
26 define( 'DB_USER', 'if0_40474735' );  
27  
28 /** Database password */  
29 define( 'DB_PASSWORD', 'L14Q6LcRDS6tH' );  
30  
31 /** Database hostname */  
32 define( 'DB_HOST', 'sql308.infinityfree.com' );  
33  
34 /** Database charset to use in creating database tables. */  
35 define( 'DB_CHARSET', 'utf8mb4' );  
36  
37 /** The database collate type. Don't change this if in doubt. */  
38 define( 'DB_COLLATE', '' );  
39
```

Ready

Cancel Save Save & Close

puis on sauvegarde.

9. on rentre sur le moteur de recherche le nom du domaine, ici :

<https://monprojetwordpress12.infinityfree.me/>

et on a notre site accessible !!!
